Subject Index of Volume 53

A.c. impedance
and cyclic voltammetric characteristics of electrooxidized carbon fibres and Pd–C fibre electrocatalytic systems in acidic aqueous solutions, 47
3-(2-Aminoethyl)thiophene
preparation and properties of maleimide derivatives of, 315
Anderson metal–insulator transition
in quasi-1D systems; implication to polyacetylene, 237
Aniline
conducting polymers of; electrochemical synthesis of conducting composite, 29
N-Arylated pyridinium
TCNQ complex salts, synthesis and electrical conductivity, 347

Band structure
of quasi-1D polycondensed hydrocarbons; energy spectra of ribbon polymers in relation to graphite, 205

Carbon fibres
a.c. impedance and cyclic voltammetric characteristics of electrooxidized, and Pd–C fibre electrocatalytic systems in acidic aqueous solutions, 47
Cellulose acetate
polypyrrole–poly(vinyl chloride) and polypyrrole–, conducting composite films by opposite-diffusion polymerization, 303
Conducting polymers
of aniline; electrochemical synthesis of conducting composite, 29
mesoscopic layered structure in, thin film fabricated by potential-programmed electropolymerization, 1
stability of, from electrochemical point of view, 149
structure–property relationships in off-resonant third-order nonlinearities of; poly(aromatic amines) and ring-S-heteroatom-containing polymers, 175
Conduction
in poly(arylene vinylene) copolymers and blends, 11
Conductive state
electron-microscopic analysis of polymer thin films capable of switching to, 71
Conjugated polymers
static SIMS of; films of substituted polyacetylenes, 193
Copper
novel organic superconductor κ-$(ET)_2Cu[N(CN)_2]Cl_{0.5}Br_{0.5}$ with $T_c \sim 11.3$ K, 155
Cyclic voltammetric characteristics
a.c. impedance and, of electrooxidized carbon fibres and Pd–C fibre electrocatalytic systems in acidic aqueous solutions, 47

Diiodoacetylenes
polymerization of, their structure and electrical properties, 21

Electrical conductivity
effects of thermal annealing on, of polypyrrole films, 325
of stretched polypyrrole film, 245
synthesis and, of *N*-arylated pyridinium TCNQ complex salts, 347
Electrical properties
polymerization of diiodoacetylenes, their structure and, 21
Electrochemical preparation
of thick porous polypyrrole layers, 227
Electrochemical synthesis
of conducting composite; conducting polymers of aniline, 29
and study of polyselenienylthiophene, 115
Electrochemistry
of some new thiophene derivatives, synthesis and, 109
Electrodeposition
different steps in, of poly(3-methylthiophene) films on Pt electrodes

studied by ellipsometry, SEM and AFM techniques, 127
Electrolyte pH
influence of, on surface morphology of polypyrrole, 59
Electron-microscopic analysis
of polymer thin films capable of switching to conductive state, 71
Electron spin resonance studies
of $FeCl_3$-doped and K^+ ion-implanted polyacetylene films, 263
Electropolymerization
mesoscopic layered structure in conducting polymer thin film fabricated by potential-programmed, 1
Ellipsometry
SEM and AFM techniques, different steps in electrodeposition of poly(3-methylthiophene) films on Pt electrodes studied by, 127
Emulsion pathway
to electrically conductive polyaniline–polystyrene composites, 283
Energy spectra
of ribbon polymers in relation to graphite; band structure of quasi-1D polycondensed hydrocarbons, 205

Fluorescence studies
ex situ and *in situ*, of electrosynthesized poly(*N*-vinylcarbzaole) in presence of various electrolytes, 95

Graphite
energy spectra of ribbon polymers in relation to; band structure of quasi-1D polycondensed hydrocarbons, 205

Hydrocarbon chains
polarizability calculations in conjugated, 37
Hydrocarbons
band structure of quasi-1D polycondensed; energy spectra of ribbon polymers in relation to graphite, 205
Hydroxyaniline
nanometer-scale structural aspects of, thin films, 309

Insulator–metal transition
random solitons in polyacetylene and, 85

Iodine doping
effect of, on miscibility of poly(*para*-phenylene vinylene) model compounds mixed with PMMA using NMR solid-state techniques, 77
Iron
ESR studies of $FeCl_3$-doped and K^+ ion-implanted polyacetylene films, 263

Maleimide derivatives
of 3-(2-aminoethyl)thiophene, preparation and properties of, 315
Mesoscopic layered structure
in conducting polymer thin film fabricated by potential-programmed electropolymerization, 1
Metal–insulator transition
Anderson, in quasi-1D systems; implication to polyacetylene, 237
Morphology
of conductive, solution-processed blends of polyaniline and poly(methyl methacrylate), 293

NMR
effect of I doping on miscibility of poly(*para*-phenylene vinylene) model compounds mixed with PMMA using NMR solid-state techniques, 77
studies of stable, organic free radicals, 379

Organic dopants
method to prepare soluble polyaniline salt solutions; *in situ* doping of PANI base with, in polar solvents, 365
Organic free radicals
NMR studies of stable, 379
Organic superconductor
novel, κ-$(ET)_2Cu[N(CN)_2]Cl_{0.5}Br_{0.5}$ with $T_c \sim 11.3$ K, 155

Palladium
a.c. impedance and cyclic voltammetric characteristics of electrooxidized carbon fibres and Pd–C fibre electrocatalytic systems in acidic aqueous solutions, 47
Platinum
different steps in electrodeposition of poly(3-methylthiophene) films on Pt electrodes studies by ellipsometry, SEM and AFM techniques, 127

Polarizability calculations
in conjugated hydrocarbon chains, 37
Polyacetylene(s)
Anderson metal–insulator transition in quasi-1D systems; implication to, 237
ESR studies of $FeCl_3$-doped and K^+ ion-implanted, films, 263
random solitons in, and insulator–metal transition, 85
spectroscopic studies of soluble and stable, blend, 161
static SIMS of conjugated polymers; films of substituted, 193
Polyaniline
emulsion pathway to electrically conductive polyaniline–polystyrene composites, 283
method to prepare soluble, salt solutions; *in situ* doping of PANI base with organic dopants in polar solvents, 365
morphology of conductive solution-processed blends of, and poly(methyl methacrylate), 293
surface studies of chemically processed, films, 333
Poly(aromatic amines)
and ring-S-heteroatom-containing polymers; structure–property relationships in off-resonant third-order nonlinearities of conducting polymers, 175
Poly(arylene vinylene)
conduction in, copolymers and blends, 11
Poly(1,4-dipyrrolobenzene)
Schottky diodes based on poly(*p*-phenylene) and, 399
Polymerization
of diiodoacetylenes, their structure and electrical properties, 21
polypyrrole–poly(vinyl chloride) and polypyrrole–cellulose acetate conducting composite films by opposite-diffusion, 303
Poly(methyl methacrylate)
morphology of conductive, solution-processed blends of polyaniline and, 293
Poly(3-methylthiophene)
different steps in electrodeposition of, films on Pt electrodes studies by ellipsometry, SEM and AFM techniques, 127
Poly(*p*-phenylene)
Schottky diodes based on, and poly(1,4-dipyrrolobenzene), 399
Poly(*para*-phenylene vinylene)
effect of I doping on miscibility of, model compounds mixed with PMMA using NMR solid-state techniques, 77
Polypyrrole(s)
effects of thermal annealing on electrical conductivity of, films, 325
electrical conductivity of stretched, film, 245
electrochemical preparation of thick porous, layers, 227
influence of electrolyte pH on surface morphology of, 59
–poly(vinyl chloride) and polypyrrole–cellulose acetate conducting composite films by opposite-diffusion polymerization, 303
soluble and film-forming substituted, from pyrrole monomers substituted in 3- and 4-positions by alkyl and ester groups, 251
Polyseleneienylthiophene
electrochemical synthesis and study of, 115
Polystyrene
emulsion pathway to electrically conductive polyaniline–polystyrene composites, 283
Poly(2,5-thienylene ethynylene)
and related oligomers, 271
Poly(*N*-vinylcarbazole)
ex situ and *in situ* fluorescence studies of electrosynthesized, in presence of various electrolytes, 95
Poly(vinyl chloride)
polypyrrole–, and polypyrrole–cellulose acetate conducting composite films by opposite-diffusion polymerization, 303
water-sensitive sensor based on modified, 403
Potassium
ESR studies of $FeCl_3$-doped and K^+ ion-implanted polyacetylene films, 263
Pyrrole
soluble and film-forming substituted polypyrroles from pyrrole monomers substituted in the 3- and 4-positions by alkyl and ester groups, 251

Ribbon polymers
energy spectra of, in relation to graphite; band structure of quasi-1D polycondensed hydrocarbons, 205

Schottky diodes
based on poly(*p*-phenylene) and poly(1,4-dipyrrolobenzene), 399
Secondary ion mass spectroscopy
static SIMS of conjugated polymers; films of substituted polyacetylenes, 193
Solitons
random, in polyacetylene and insulator–metal transition, 85
Spectroscopic studies
of soluble and stable polyacetylene blend, 161
Stability
of conducting polymers from electrochemical point of view, 149
Structural aspects
nanometer-scale, of hydroxyaniline thin films, 309
Structure
polymerization of diiodoacetylenes, their structure and electrical properties, 21
Structure–property relationships
in off-resonant third-order nonlinearities of conducting polymers; poly(aromatic amines) and ring-S-heteroatom-containing polymers, 175
Surface morphology
influence of electrolyte pH on, of polypyrrole, 59
Surface studies
of chemically processed polyaniline films, 333
Synthesis
and electrical conductivity of *N*-arylated pyridinium TCNQ complex salts, 347
and electrochemistry of some new thiophene derivatives, 109

TCNQ
synthesis and electrical conductivity of *N*-arylated pyridinium, complex salts, 347
Tetrathiafulvalene
novel oligomeric TTF systems with extended conjugation, 353
Thermal annealing
effects of, on electrical conductivity of polypyrrole films, 325
Thiophene derivatives
synthesis and electrochemistry of some new, 109

Water-sensitive sensor
based on modified poly(vinyl chloride), 403
